Using Super OLED Sensor,
Check the image quality twice better than other panoramics.

3 in 1 system & detachable sensor

Economical, Reasonable Dental X-ray imaging device with combination of Dental CT, Digital Panoramic and Cephalometric.

Adoption Super OLED Sensor

Easily shown clear and high quality image when the luminous body absorbed X-ray, the each cell converts Electronic signal without any spread and overlap.

Excellent rate of X-ray absorption

CCD EMOS absorbs 35% of X-ray so it is needed more X-ray. But Super OLED sensor absorbs 100% of X-ray, and it is shown high quality image with low X-ray.

Modern and Simple

Modern and Simple design added with work convenience and inefficient.

RealScan

➤ PointNix RealScan- Analysis 3D Imaging Software

RealScan supports user for planning treatments in accurate ways

Accurate and easy analysis of diagnosis/treatment plan

- 
3D Volume Rendering
 Three dimensional images are supporting for analyzing of patients' diagnosis and treatment plan
- 
MAR(Metal Artifact Reduction)
 Accuracy of diagnosis is enhanced by removing metal artifact and calibrating blurring of metal materials.
- 
Measurement Tools
 Information of length, angle, bone density and anatomy is precisely measured by using three dimensional data.
- 
Automatic Bone Density Measurement
 Bone density condition of patients' bone is automatically measured.
- 
DICOM 3.0
 DICOM 3.0 guarantees the superior quality of data compatibility.
- 
Cross-Sectional View
 Sliced images from various angles are provided a minimum of 0.1 mm size.

F.O.V (10X9cm) PointNix RealScan- Analysis 3D Imaging Software

3D Cube
360° rotated data from one scanning is reconstructed to 3-Dimensional image with the same resolution level.

Oblique Slice
Oblique Slice is to briefly analyze the image of any selected Area

3D Endoscopy
Internal structure of bone, blood vessel, and other areas except for blood vessel are accurately observed through virtual 3D Endoscopy.

3D Implant Simulation
Through the 3D Implant Simulation function, more detailed treatment plan is available, and density of bone structure around implant is measured.

The Most Advanced HD Panorama & Scan Type Cephalo System

2 in 1 Digital System_Panorama+Cephalo

Point 800S HD®

- ▶ One Detachable Sensor for both Panorama and Cephalo
- ▶ Secured Patient's Safety due to Low Radiation Dosage
- ▶ Simple and Refined Design
- ▶ Available for AP, PA, LAT and Carpus
- ▶ Soft Tissue Calibration

Detachable Sensor Type

The Best Quality of Images

Direct type sensor technology offers clear, accurate and high-defined images which are free from image blurring issues. Also, due to the highest X-ray absorptiveness, it maximizes the quality of images.

The Greatest Durability

Medium/large size of X-ray tube tank is able to take more than 80 panorama images per day, which offers the World-class durability.

The Most Increased Convenience

Images from Panorama, CT, Intra oral camera, Digital camera, Intra oral sensor and etc can be controlled by one program, CDX View.
